FOR IMMEDIATE RELEASE

**PRO TECH INTRODUCES NOISEBUSTER® ELECTRONIC NOISE CANCELING SAFETY
EARMUFF TO LIGHT CONSTRUCTION MARKET AT WORLD'S LARGEST SHOW**

Show Special--Free Shipping on NoiseBuster Earmuff—Jan. 9-14 at www.noisebuster.net

FORT PIERCE, Fla., January 5, 2006 – Pro Tech Communications, Inc. (OTCBB:PCTU) will introduce the NoiseBuster® Electronic Noise Canceling (ENC) Earmuff to the light construction market at the 2006 International Builders' Show, January 11-14, in the Orange County Convention Center in Orlando, Florida. The International Builders' Show is the largest annual light construction show in the world—over a million-and-a-half square feet of the latest and most advanced building products and services ever assembled.

Detailed product information and a “free shipping” special for the NoiseBuster ENC Safety Earmuff are available at www.noisebuster.net. To obtain the show special, purchasers must enter NAHB as the promotion code, good through January 14.

Unlike traditional passive-only earmuffs and earplugs, the NoiseBuster ENC Earmuff provides more complete protection from a wider range of noise frequencies, particularly the low frequency noise generated by engines, motors and fans that is prevalent in many industrial settings. The passive component of the NoiseBuster ENC Earmuff has a Noise Reduction Rating (NRR) of 26dB (when worn over-the-head) and 25db (when worn behind-the-head) and the ENC component provides as much as 20dB of added noise reduction within the low-frequency bandwidth of 20-800 Hz. The earmuff is priced at \$149.

The NoiseBuster's audio input feature also makes it an excellent choice for do-it-yourself users of power tools, lawnmowers and other equipment who want to listen to music, as well as for motor sports fans when used in conjunction with scanners (devices that allow fans to hear the radio communications of race car drivers and pit crews). For audio to be heard in the presence

of noise it must be overamplified above the noise thereby creating a possible hearing hazard. The NoiseBuster ENC Earmuff cancels noise so that music can be enjoyed at safer volume levels. The product delivers excellent audio quality, comparable to that of higher-priced, noise canceling audio headphones currently on the market.

“We believe the NoiseBuster ENC Earmuff is a true breakthrough in industrial hearing protection,” said Richard Hennessey, President, Pro Tech. “Passive earplugs and earmuffs are effective against mid- and high- frequency noise, but they lose their effectiveness at 500 hertz and below. Electronic low frequency noise cancellation delivers an additional level of protection and enables workers to hear crucial sounds such as speech and warning signals.”

Mr. Hennessey continued, “Additionally, we know that many light industrial workers and do-it-yourselfers enjoy listening to music while working, and there are a number of music-playing earmuffs with built-in radios on the market today. At the NoiseBuster’s attractive price point, consumers can use this technologically-advanced product to listen to any music source at safe volume levels.”

The NoiseBuster ENC Earmuff is powered with a single AA battery that provides 65 hours of use. The unit is resistant to water, moisture, contaminants, mechanical shock and vibration. The product features soft, pliable ear cushions and an adjustable, extra-wide headband that can be worn over-the-head or behind-the-head. The unit is warranted for one year.

Members of the press can receive an evaluation unit by contacting Joanna Lipper at 203-226-4447 ext. 3506 or jlipper@nctgroupinc.com.

About Pro Tech Communications, Inc.

Pro Tech Communications, Inc. engineers, designs and distributes audio and communications solutions and other products for business users, industrial users and consumers. The company’s mission is to utilize its patented technologies to deliver the most advanced, feature-rich, durable and comfortable products at the most competitive price. Pro Tech’s most recognized brands include the Apollo™ line of high-performance products for office and call center environments, the ProCom™ line of highly-durable headsets for drive-through restaurant personnel and the NoiseBuster® electronic noise canceling consumer audio headphone and safety earmuff.
